

LF REPLACEMENT WINDOWS & CONSERVATORIES

Our Window Shoot Bolt Locking System

With 32 yrs experience in manufacture it is important to us that we choose a locking system that would last the test of time and is obviously easy for our customer to maintain over the years. This is why we choose to use the current locking system, the lock fixing points pick up on the internal steel reinforcing with the PVC profile chambers for strength. This locking system also allows a visual inspection of the lock and makes it easy to lubricate, as it is surface mounted.

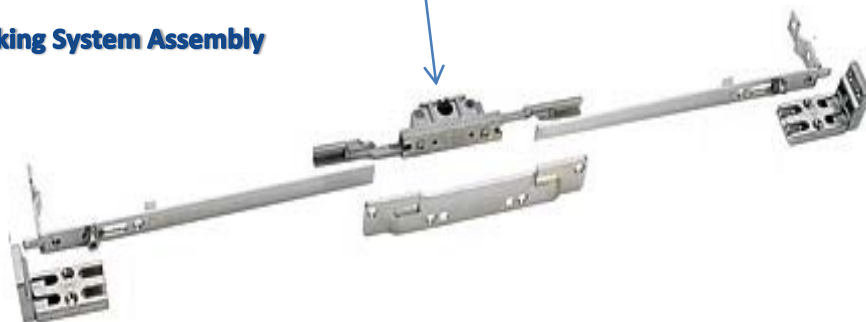

Those locking systems enclosed inside the profile are impossible to maintain and to see a fault and therefore come with a shorter warranty period in most cases as they cannot be lubricated hidden inside the profile chambers of the frame.

Our Suppliers Shoot bolt locking system for our casement windows incorporate all the benefits of safety and security expected of modern window technology in today's environment. The shoot bolt espagnolettes have been vigorously tested by our suppliers for security and performance above the requirements of industry standards.

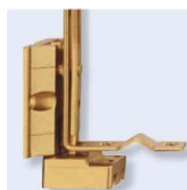

Key Points

- Have proved to be reliable and secure system over the last 20 yrs
- benefits of safety and security expected of modern window technology in today's environment
- Easy to Maintain and lubricate, and visual to the eye for assessing the workings of the lock
